

Aushadh AI Health Summary

Generated 24 March 2026 | Dr. Rajesh Kumar

Summary

Mr. Rahul Sharma was admitted with acute chest pain and shortness of breath. Emergency cardiac workup revealed STEMI (heart attack). Underwent urgent angioplasty with stent placement in LAD artery. Now on dual antiplatelet therapy, statins, and beta-blockers. Discharge to cardiac rehabilitation with strict monitoring required.

Diagnosis

STEMI (ST-Elevation Myocardial Infarction) - Acute Anterior Wall MI - Critical Care Unit admission - Post primary PCI with drug-eluting stent to LAD - Triple vessel disease - Hypertension - Type 2 Diabetes Mellitus

You had a heart attack (STEMI). The main artery supplying blood to your heart (LAD) was completely blocked. An emergency procedure was done to open the blocked artery and a small tube (stent) was placed to keep it open. You were in the ICU for 3 days. You now have three arteries that have blockages and need ongoing cardiac care.

Medications

Medicine	Dose	Timing	Duration	With Food
Aspirin	75mg	Once daily - Morning	Long-term (lifetime)	After food
Clopidogrel	75mg	Once daily - Morning	12 months (dual antiplatelet therapy)	After food
Atorvastatin	40mg	Once daily - Night	Long-term (lifetime)	After food
Metoprolol	25mg	Twice daily - Morning & Night	Long-term	After food
Ramipril	5mg	Once daily - Morning	Long-term	Can take with or without food

Side Effects to Watch

- 🚨 Bleeding from gums, nose, or in urine/stool -contact doctor immediately
- 🚨 Chest pain, breathlessness, palpitations -call emergency (102/108) immediately
- 🚨 Severe dizziness, fainting, or fall -could be due to low blood pressure
- 💊 Mild stomach discomfort -take medicines after food
- 😴 Fatigue or mild dizziness -avoid driving until stable

Emergency – Call Doctor If

IMMEDIATE ACTION REQUIRED: If you experience chest pain, difficulty breathing, sudden sweating, or fainting, call ambulance immediately (102/108). Do not wait. This is a life-threatening cardiac condition.

Action Checklist

- ☐ [Medications] Take Aspirin 75mg daily -lifetime
- ☐ [Medications] Take Clopidogrel 75mg daily for 12 months
- ☐ [Medications] Take Atorvastatin 40mg at night
- ☐ [Medications] Take Metoprolol 25mg twice daily
- ☐ [Follow-up] Cardiac rehabilitation program -3 times per week

- ☐ [Tests] ECG review after 2 weeks
- ☐ [Tests] Lipid profile and cardiac enzymes after 1 month
- ☐ [Tests] Echocardiography after 3 months
- ☐ [Lifestyle] Strict low-salt, low-fat diet
- ☐ [Lifestyle] No smoking or alcohol
- ☐ [Lifestyle] Light exercise only after doctor approval
- ☐ [Monitoring] Monitor blood pressure daily
- ☐ [Emergency] Watch for chest pain or breathlessness
